## What's New in the Accordion Menu Advancer For Expression?

A small form of accordion menu generator that helps you to create simple, lightweight, cross-browser and SEO-friendly accordion menus in just a few minutes. Accordion Menu Advancer is an awesome user interface that helps to make your work simpler, faster and easier.

**Key Features:** To generate an image map you need to select at least one element (image or any other element) for which you want to add a map. Right clicking on the element and choosing "map properties" you can see all elements with available options. Accordion Menu Advancer allows to control some properties of map elements but not all of them. If you select more than one element (images or any other), Accordion Menu Advancer generates one big image map. This big image map will be added to your website, and your CSS will also be added to the document. In order to use it, you need to change the properties of CSS for that element. Images used in the maps are generated for each image element according to the properties you selected for the map. Accordion Menu Advancer has an integrated live preview function that allows you to see the results of changes you do in CSS and see your site in real time.

Some of the map properties are includeable: name of the image (src) attribute link to the page that the image is on URL to use for a link or image button URL to use for a JavaScript link URI of a shape to use for the image button Display property of the image element. Name of the image is required for the map, all other properties can be set at any time. You can choose not to have a link on the image that can be clicked when users are clicking on the map. To use a JavaScript link you need to choose a type of image. You can select the one that allows you to add a JavaScript code to it or a default image. For example, you can choose to have a button image with JavaScript link attached to it (HTML tag). At the bottom of the page you can choose if you want to have a border on your image. You can choose a light-weight border and a dark-weight border. The light-weight border is clickable on images. The URI of the image can be set anywhere on the page. You can set it on an image or even on a link that will be on the map. You can add icons to the map. You can use regular icons or you can select a folder where you have images that you want to use. This option shows a list of all icons in the current folder and allows you to select the image you want to use for the icon. When you choose a folder you will see a dialog box where you can add a name to the icon
