ABI (Autodesk Application Binary Interface) is a computer programming interface that enables the software developers to create and reuse application programs by encapsulating the programming code, making it available for use by a variety of developers, and then to integrate the ABI-based programs into new or existing AutoCAD applications. History AutoCAD was originally written in 1984 as a general-purpose software application suite for 2D drafting and 2D and 3D data management and production by Autodesk, then a small Silicon Valley software company. In 1989, Dave Goldberg, a programmer from New Jersey, released AutoCAD 2D with very little documentation. It was a complete rewrite of AutoCAD 1.0 (1978) and the first version to be based on an interpreted language. AutoCAD 2D was released in 1989 to the public as shareware, under the name AutoCAD 2.0, and it was the first product of its kind to allow users to create interactive 2D drawings. This development raised the profile of the company and provided the foundation for future products, including the release of AutoCAD 3D in 1990. Autodesk is an American software company based in San Rafael, California, that was founded by brothers Douglas and John H. Grace in 1983. The company originally was involved in the creation of the first "AutoCAD" package of drawing software. Autodesk acquired the company in 1999 for US\$45 million. Since 2003, AutoCAD (along with AutoCAD LT) have been commercially released under the Autodesk Family of Products. Features AutoCAD comes in two versions: AutoCAD and AutoCAD LT. AutoCAD LT is intended for large organizations, while AutoCAD is for smaller and medium-sized businesses. AutoCAD is available as both a desktop product and as a web-based product. AutoCAD and AutoCAD LT both have the same basic features and functionality. The AutoCAD and AutoCAD LT 2007 product series feature support for interoperability with a broad range of AutoCAD data formats from other vendors including ISIS, DWG, DXF, etc. Through the operation of the ABI (Autodesk Application Binary Interface) API, AutoCAD enables code written in AutoLISP, Visual LISP, VBA, and other languages to be made available for integration with the native tools and functions of AutoCAD itself, a1d647c40b
