I thought it would be easiest to purchase CUDA-capable graphics cards and have them perform the computation. However, I am fairly comfortable with the code and the parameters for the algorithm, and I can reuse the code for many different input values. Should I purchase GPUs instead of mining (or otherwise acquiring) them

**The Relationship Between Blood Lead Level and the Metabolic Syndrome: The Kuwait Coronary Artery Disease Study (K-CAS).** Lead exposure is considered an important and neglected environmental risk factor of chronic disease, including cardiovascular disease. Evidence from cross-sectional studies indicates that a risk of the metabolic syndrome (MetS) might be associated with low-level blood lead. We aimed to examine the association between blood lead level and metabolic syndrome in men and women in a large epidemiological study population. In this cross-sectional study, a total of 9,069 participants (4,279 men and 4,790 women) aged 40 to 89 years were examined in the Kuwait Coronary Artery Disease study (K-CAS). Blood lead concentration was determined by inductively coupled plasma mass spectrometry. MetS was defined according to the International Diabetes Federation definition. Overall, 3.46% of participants had MetS. Blood lead concentrations were in the
