The present invention relates to an ultrasonic wave transmission/reception assembly, an ultrasonic probe, a method of manufacturing the ultrasonic wave transmission/reception assembly, an ultrasonic wave transmission/reception method, and an ultrasonic wave diagnosis system. Conventionally, an ultrasonic diagnosis system utilizing an ultrasonic wave having high directivity is proposed. In the ultrasonic diagnosis system, when a user applies a probe on a human body, a transmission/reception unit receives ultrasonic waves transmitted from the user and reflected by the human body, and converts the received ultrasonic waves into an electrical signal to output the signal as a reception signal. The ultrasonic waves transmitted from the user are received by the probe and again converted into the reception signal. Then, an ultrasonic wave signal is output from the probe and then input into the ultrasonic diagnosis system. FIG. 9 is a schematic view illustrating an example of an ultrasonic wave receiving side of a conventional ultrasonic wave transmission/reception assembly. In FIG. 9, a surface acoustic wave device 1 has an operating voltage supply terminal 2 and an input terminal 3. The surface acoustic wave device 1 includes a piezoelectric substrate 4 and a propagation path portion 7. The piezoelectric substrate 4 has a surface on which an input electrode 5 and an output electrode 6 are disposed. The propagation path portion 7 is made of a piezoelectric film. The operation voltage is applied to the input electrode 5 by the operating voltage supply terminal 2. The input terminal 3 is connected to the output electrode 6. The surface acoustic wave device 1 is disposed on an insulating substrate 8. One end of a transmission rod 9 is connected to the input terminal 3 of the surface acoustic wave device 1, and the other end of the transmission rod 9 is connected to an ultrasonic wave transmission/reception
