Relationship types Relationship types are used to model one object being part of another. They are typically not drawn, but merely available to the user in some tools. The relationship type differs depending on the application that the relationship belongs to. Some applications, such as CAD and drafting applications, have no relationship types. Other applications, such as detailing applications, have many different relationship types, each requiring a different command to insert or delete. Some common relationship types include: Angle formed between two edges. AutoCAD For Windows 10 Crack only has two types of edges: A solid edge and a dotted edge. The dot style indicates the direction in which the two edges face. The angle formed is either 90° (a full turn) or 45° (half a turn). 90° is the default. Angles between three edges. AutoCAD has four types of edges: A solid edge, a dotted edge, and two dotted edges at a 90° angle to each other. The type of edge determines the angle formed. Angles between faces. AutoCAD has four types of faces: An interior, two exterior, and a "hidden" face. The hidden face is accessed through the sub-menu 3D > Faces. The orientation of the faces can be inferred from the dotted edge that connects the face with the edge of another face. AutoCAD has several types of face angles, depending on how many faces are included in the angle: 90°, 60°, 45°, 30°, and so on. Angles between two faces. AutoCAD has four types of faces: An interior, two exterior, and two sides. The sides are the hidden faces of two other faces. The orientation of the faces can be inferred from the dotted edge that connects the face with the edge of another face. AutoCAD has several types of face angles, depending on how many faces are included in the angle: 90°, 60°, 45°, 30°, and so on. Angles between two lines. AutoCAD has three types of lines: A line segment, a line series, and a spline. The line series are the points in between two line segments and the line series can have an angle between the line segments, depending on the type of line series. AutoCAD has two types of angles between line segments: 60°, and 90°. Angles between one line a1d647c40b
