Not sure if AutoCAD will help you or frustrate you? Read on to find out how AutoCAD makes it easier for you to create. Smart Guides One of AutoCAD's biggest advances since the last release of AutoCAD is the ability to place the cursor directly over features and automatically place a guide on the feature. This technique is named smart guides, and it was designed to make AutoCAD and other drafting software much easier to use. A smart guide is similar to a guideline, but a guide can be placed in multiple places in the drawing, and it adjusts as the user changes the size of the drawing or enlarges or reduces the workspace. The user can directly edit the guidelines by removing them or repositioning them. To create a smart guide, follow these steps: Draw a line. Select the Line tool, and click to place the first point. Click anywhere on the line to complete the first point. Press and hold Shift to add the next point. Hold down the Ctrl key to create a circular guideline. Smart guides can be repositioned with the Selection tool. You can also set the position of a smart guide by holding down the Alt key and moving the mouse. The cursor turns into a pushpin (a pointer with a dot inside of it). Click the mouse to move the smart guide. Smart guides can be made from the ribbon or the panel
