GsyncSwitch is a tiny tool that provides you with a quick way to toggle G-Sync or HDR on and off according to how you are using your computer. It is worth mentioning that the tool does not have an interface and that you can access it from the System Tray. The lack of interface is not a major setback if you were to consider the role of the app, namely to turn HRD or G-Sync on and off. You do, however, have the possibility to configure the tool to launch with Windows. The idea behind this tiny program is to provide a handy solution to toggling the G-Sync and HDR on and off. Normally, you would have to access the NVIDIA Control Panel, find the option and uncheck/check the Enable G-Sync box. Regarding HDR, you typically need to access the Windows Settings and find the Display under the System menu. Sure, it may not take too much time, but with this tool, you will be able to do it in a fraction of a second. Moreover, it can come in handy if you are working with rendering tools or playing video games.
