Imagine getting the best sounding tones possible from your synth. Now you can. Rhythm Shaper 2 is the most sophisticated dual instrument of its kind. Designed from the ground up, it not only rocks the sound of an authentic analog tube, but it rocks the software world. This time, you get stereo output, and it's worth the price of admission. You get a dual 60 Watt transformer. A 1.5MM dual voice synth amp. And the most complicated analog circuit yet designed in a digital application. That's right. More than 7 mega-webs of analog circuitry, more than 200 parts in this beast. And the look, the feel, the way it sounds, this synth is actually bigger in scope than your choice of analog synth. Rhythm Shaper 2's wave form inspiration is its greatest strength. Rhythm Shaper 2's wave form inspiration is its greatest strength. This synth's original waveform engine has been streamlined and enhanced. You won't believe how it sounds! Innovative algorithms produce the most complex and convincing sound. And you will find the most smooth and realistic form that you ever heard. In the end, it is the wave shaping that truly makes Rhythm Shaper 2 the highlight of our new category. The wave shape is an analog invention that is often associated with analog tape recording. Indeed, the original analog time signatures are a perfect match for recording. They are also one of the most effective ways to control the dynamic range of a sound. As it turns out, their math is the same as the wave shaping function found in the almost mythical modeling circuits. The core of Rhythm Shaper 2's waveform is a true analog integration of a very precise oscillator to a pure sine. That produces the most complete spectrum of any synth ever used in a software synth. You can use all of the new features of Rhythm Shaper 2 to sculpt sounds. It has a fully programmable interface. In fact, you can even write your own patches. The creative path is truly unlimited. In fact, this synth can and will change the way you think about creating sounds. Don't call it a reverb. Call it a soundshaper and watch the new world of synthesizers unfold. Rhythm Shaper 2 is more than just a reverb. It's the hottest dual synthesizer on the market. It's the pulse and sound shaper that you've been dreaming about. Its dual synthesizer function not only includes the new reverb you've never seen before. But the

The ability to generate a harmony is often the most important component of synthesis, manipulation or composing an arrangement in many types of music. When we are able to generate the tones of a chord we can lay it over and harmony and melody. There are 2 ways to add harmony in synthesis and one we refer to as layering. We can add a harmony at any time between the synthesis at the beginning and the end of the track. The harmony, or Melody, will respond to changes in the way you process the track and tune it, then add the harmony or melody and manipulate it until it is clear and ready for layering. The other way we add a harmony is when we are adding different harmonic elements to the track, at the point when the track is ready to process, the different harmonic content is added to the track. As an example of this, let's take the same scenario but take 2 tracks of an Electric piano. The first track will be the base melody line and the other track will be a chord melody where we can adjust the speed at which the chords pass through the piano. So now we have 2 different harmonic scenarios where we can lay a harmonics, Melody, or chord on top of the base track. And we can adjust the speed at which the track passes through the sequencer and or at the point of processing the track we can apply the different harmonic content. WaveShaper2 is the flagship of the RhShaper family of modules. The main feature is the ability to curve the amplitude of the track, the way you process your track can be along the pitch axis or the time axis. This will enable you to create new sounds through the use of a harmonic concept, the concept being to try and get the harmonic content in waveform

based sound to match the pitch of the track, effectively what we call Harmonisation. We have discovered the nature of producing WaveShapers is that as you curve the sound more it distorts more, however this will only happen if it matches the Pitch of the track so you can compensate for this distortion by processing the track at the opposite end of the pitch axis to the tracking point. This creates various harmonic effects that are intuitive to those who have a working knowledge of harmonic based music theory. The other key feature of the WaveShaper series is the ability to reverse the signal either left or right of the track. This is done by adjusting the 'End At' parameter in the Parameter Control Window. An example of this would be b7e8fdf5c8

## RH-WaveShaper2 Full Product Key

This module provides the fast way to create stunning new sounds without entering any technical or musical knowledge by using the unique RHSynthesizer technology. Each key on a keyboard generates a sine tone, without any connecting wires, this sound is then processed and shaped by the wave shaping algorithm resulting in a new sound while playing. With RHSynth, and the right RHSynthesizer program running in your DAW, you can create your own RHSynth tones and programs which sound like never before. \* Features of the RHSynth2: - Two RHWaveShaper 2 RHSynths capable of producing dual output with both stereo and mono capability. - Wide stereo effect selection ranging from bass to high frequency. - 8, 12 and 16 step wave shaper for an ultimate bass sounds. - Generate full sound spectrum which include very low bass tones as well as high frequency sound. - 3 presets using the RHSynth2 with other software programs are included. Included is the RHSynth2 basic program which will generate the basic wave shaping sound as an example. After you have used the RHSynth2 module to create the "E" "D" and "A" sounds for Example 1, then you'll be able to try new wave shaping in the oscilloscope window. For A, you will see "E" wave shaping in the oscilloscope window. For D, you will see "A" wave shaping in the oscilloscope window. In the oscilloscope window, you will find the redline shape will appear as a rising tripple. The difference is not that obvious yet, but this is the shape for the bass. For Bass, you can see: For the tripple wave, you can find all the frequency components varying between 0Hz and the bass frequency. For the Stereo, when you find the redline appears in left speaker, it means that the right channel is out of phase with the left channel. Also, you can find the redline will be rectangular. For C, you will find the redline appear in both speakers which means the two channels are the same frequency. That means the oscillator is producing a sine wave. E, A, D, C - For left channel, the frequency range is between 0Hz and 3kHz.

## What's New In RH-WaveShaper2?

We are happy to announce the release of a new piece of software - SynthEdit - a powerful and lightweight music creation suite for the Windows environment. The SynthEdit interface, like the wave stretching software (the WaveShaper2), is simple and intuitive, and ready to use immediately with virtually any type of sound. A new feature has been added with the release of SynthEdit 5.0 for Windows - the ability to create wave shapers directly in a sequencer. Highlights of SynthEdit include: - working sequencer for processing multiple audio tracks and creating the wave tables and LFOs. - intuitive operations and programming for building and shaping the wave using a selection window, a simple toggle button and a few other controls. - visualisation of the waveforms on the screen - combined control of the waveform and the LFOs - super fast performance - sophisticated scripting environment - simple MIDI and USB support - WAV playback and normalization of audio tracks - sample playback for time stretching - audio editor with trimming, gating, fade-in/fade-out, wave file generation - online manual and demo video tutorials The release of this software is a big step forward in the development of synths. With the impressive artistic capabilities of synths being more and more realized, there is now a need for a simple and intuitive environment to explore, create and process wave-like elements such as tones and drum patterns, as well as drum kits, basses and other complex sound material. We are currently in the process of developing a simple interface design for creating wave shaping and then exporting the wave as a wave table. If you have any comments or suggestions on the design or functionality of this software, please contact us. Last edited by SynthEdit on Thu Oct 07, 2018 3:42 pm; edited 1 time in total Let me start by saying that I am not a musician at all, and that's kind of the point. I'm just a computer-loving technophile with some musical aspirations. Those "permissions" are in order for the software to be able to record directly from your soundcard. Without the permissions, you wouldn't be able to save the output of your synth into a WAV file. For those who don't know how to get those permissions: the music/sound file on your hard disk is not protected and can be altered/edited.
