CyberLink Power2Go is an innovative suite of tools designed for disc burning and backup, with support for Blu-ray, audio editing and DVD production. It delivers an advanced burning engine that is not only capable of writing your audio, video or data compilations on a CD, DVD or Blu-Ray disc, yet also of performing other tasks such as copying discs, erasing them, converting audio files, mounting virtual drives and more. An all-in-one disc burning and copying tool The application's core is focused on performing a qualitative backup and burning operation of your media, documents or anything you can think of. Its main window provides one-click access to all the modules and functions, enabling you to choose the task to perform using a modern-looking menu. As such, you can select the type of disc to be created (data, music, video, photo gallery), as well as opt for a disc copying operation or for a system recovery disc that you can use if Windows stops working. Further disc-related functions at your disposal Another selection of Disc Utilities will allow you to erase discs, rip audio CDs, create a virtual drive, as well as to convert audio files between various formats or find your previously burned discs with the help of the dedicated manager. Your social life can also be transported onto a disc by downloading your online photos and videos (from Facebook, Flickr, YouTube and Vimeo) and burning them directly, no special efforts required. A powerful and fast suite of tools for disc burning In addition to all of the above, CyberLink Power2Go delivers outstanding burning speed, depending of course on the performance of your disc writer. However, its engine is smart enough to adapt your system resources to its needs, so as to ensure a smooth and pleasant experience. All in all, the application fulfills all the requirements that a disc burning software should. It's smart, speedy, user-friendly and good looking, which makes it worthy of a top spot in its category. A global variable can be accessed from anywhere in the code. Also, if the variable is not declared in an outer scope, this is still interpreted as global. You can easily use "var" instead of "function" to declare variables. This is also considered a global variable. The present invention relates to electric washing machines which are used in the washing of clothes, dishware, rugs, and other articles of many kinds, and more particularly relates to such a machine which includes a carousel having a plurality of cylindrical segments for simultaneously performing a series of washing and rinsing operations on the garments or other articles as they are transported therearound between such segments, the movement of the segments being driven in a circular path. An arrangement of the above type, including a motor-driven carousel for transporting and rotating a series of cylindrical segments in which the garments are placed during washing and rinsing, is described in U.S. Pat. No. 3,953,104. This patent also describes the use of a water reservoir (
