If you want to start experimenting with an editing program with a variety of special-effects filters, I recommend using the GIMP. It works just as well as Photoshop and has many more filters. GIMP is freely available online at [www.gimp.org/gimp-artists-guide/](http://www.gimp.org/gimp-artists-guide/). You can also get other image programs, such as PaintShop Pro and MacPaint, that are free, but I don't recommend them for beginners. They are more primitive than Photoshop or GIMP. They lack many of the powerful features and often include unwanted plug-ins (additional software that has to be purchased) that you don't need. In addition to the features already mentioned, Photoshop and GIMP offer great tools for blending and exporting your images for use in other image programs. Although the features of the various programs are nearly the same, including the fact that a few features are buried deep within the menus, you may find that you prefer one program over the others. You have options. GIMP will work fine for most of your needs. If you use Photoshop, you'll most likely find that you need the other features too. I recommend that you try out all three, if you can, and continue to use the one that works best for you. A new version of Photoshop, Photoshop CC, hit the market in 2015 that is much more intuitive and is the absolute best version of Photoshop for the beginner. It's also the version with most of the new features. Navigating the Photoshop Menus Photoshop's menus are laid out so that to locate the various features you need, you only need to look at the top and bottom of the screen. As a result, you don't need to scroll down to find them when you're editing an image. Figure 4-1 illustrates this fact by showing a 2,000-pixel-wide photo that was resized to a smaller size so that you can see the navigation window. These screens provide access to the following areas of Photoshop: Figure 4-1: Navigate Photoshop's menus at the top and bottom of the screen. You can access these screens with any key combination, but I find the shortcut key combination Ctrl+M+V (Windows) and Cmd+M+V (Mac) much more comfortable. If you're left- or right-handed, use

Talk about a phoenix rising from the ashes. Having originally appeared as a very slim special edition of the bootleg Overdub in 2005, the classic Call To Arms has returned in a 2CD reissue on a previously unheard 1993 original release. Utilising the original stems from master tapes dating from 1979 through to 1983, they were all restored and remastered by producer Bill Brewster and engineer Stuart Bruce. A completely new transfer from original analogue sources and re-mastering takes the original releases firmly into the 21st century, resulting in the release of this long-lost masterpiece to an entirely new generation of Call To Arms fans.

Effects of balance/stability training in children with developmental coordination disorder. Children with developmental coordination disorder (DCD) have performance deficits across a wide range of motor skills and participate in balance/stability training to achieve successful classroom participation. We hypothesized that participation in balance/stability training would result in learning gains in these children. Subjects were 15 children with DCD and 15 age-matched typically developing children. Children underwent balance/stability training for 12 weeks, and the effects of intervention were measured using the Movement Assessment Battery for Children, Timed Up and Go (TUG), a balance/stability assessment tool, and Postural Assessment Scale for Kids, which evaluates sitting stability. Results showed that for each performance measure, the children with DCD improved during the intervention period and had better posttest scores than the children with typical development. However, only the TUG results demonstrated a significant difference between posttest and pretest scores. These data show that participation in balance/stability training might improve DCD children's motor skills, although further research is warranted. This study is the first to investigate the effects of balance/stability training in children with DCD. Results

suggest that balance/stability training may be beneficial to DCD children and may be a useful intervention strategy in schools. The Russian news service RIA Novosti said the US is preparing its largest military deployment to Ukraine as tensions rise between Kiev and Kiev-backed insurgents in eastern Ukraine following the downing of a Malaysian passenger jet. "The potential risk of an increased US military presence on Ukrainian territory could not be ruled out," RIA said in an article dated February 4, 2014. The report adds that
