This are the words I see, but not the document with the words. I would really appreciate your help. A: The problem with your code is that you are only copying down the initial line and ignoring the rest of the rows.

The next problem is that you are not creating the DOM elements correctly and then adding them to the dom table. I think what you want to do is this. 1. Get the document object 2. Get the row collection from `document.getElementsByTagName("tr")[0]` 3. Loop through each row and add the input elements to the row (i.e. textarea, input text, select, checkbox) 4. Append the rows to the table `var rowCollection = document.getElementsByTagName("tr")[0]; for (var i = 1; i`

[Retrospective analysis of efficacy and safety of inhaled salbutamol in the treatment of children with bronchiolitis]. Bronchiolitis is the most important cause of morbidity in infancy. There are no published studies on the use of inhaled β 2-sympathomimetic therapy in children with bronchiolitis. We analyzed clinical and functional data from the first 100 children who received inhaled salbutamol for the treatment of bronchiolitis at the University Hospital of Salamanca. Eighty-five percent were female and the mean age was 12.02 months (\pm 5.46). The mean duration of bronchiolitis and the hospital stay were 1.90 ± 0.97 and 1.24 ± 1.04 days, respectively. The mean intake of inhaled salbutamol was 0.27 ± 0.56 per day, and the mean amount of droplets was 0.09 ± 0.29 per day. The mean intake of the next day was 0.36 ± 0.77 . Considering the mean FEV1 pre and post treatment, a statistically significant difference was found ($p=0.03$), and FEV1 was reduced by 4.07% when salbutamol
