I have been using Photoshop for the past eight years. As its features adapted to modern needs, my skills have evolved. The tool's numerous options like layers, paths, and color modes provide a variety of functionality which changes from task to task. While some of Adobe's latest programs have clunky interfaces, Photoshop is responsive and full-featured. I love using it. Lightroom Classic can edit raw files, which most new DSLR models can shoot. Lightroom Classic is also Adobe's "unsafe to obsolete" replacement for Photoshop CS3s and CS4-equipped camera owners. It also contains the previews, metadata, and search in one place. New features include: The biggest change to Photoshop CC for me is the inability to use the keyboard to move, rotate, resize, or distort the image frame. Second, the text tools have been moved into a panel. Third the layer controls have been moved to the top right of the image. Fourth, the Layer controls panel is gone, replaced with a Panel Presets bar. Fifth, there is no real support for "inside the box" type retouching. These are the pros that Adobe offers Photoshop CC for. Adobe Photoshop does keep on truckin', and it's showing no signs of slowing down anytime soon as it continues to grow and evolve. In parallel, we are evaluating a number of the possibilities for new features that can be packed into a June 2020 release of Photoshop and CC, including an SVG-based, vector-centric workflow (example: a basic objective-based 3D challenge), a game-based workflow, and a design-focused workflow. Other ideas such as the future of the Motion Graphics and Graphics Production features are also being discussed. The team is also looking at the possibility of a next-generation CC editor that will be more deeply integrated into the platform (for example, a 'drag and drop' approach) and expand the installed-base of creative product. In addition to the major themes, there are also a

number of smaller, one-off features that have been built in as part of the effort to evolve the platform for future generations. For example, there are now full-screen layer panning and rotation controls built into the UI (using the overlay panel more like Sketch), support for Extended CALayers, new lens correction features (Photo Style, Color Look Up, and the camera panel for example), and other items. By the time we ship the next major version of CC, we will have a well-defined set of core features, representing the promise of the future of the platform. We have a set of thematic features to drive the roadmap, and a smaller set of nontheme features that can be delivered more quickly to ensure that we have an edge. These features will have clear and defined goals, to enable deeper integration, and to be able to ship features quickly.
