Connect – Photoshop now automatically detects Ethernet connections and makes it easier to transfer large files to and from an external device. When several people are working on a single file, the larger the file, the more efficient it is to host it on devices or cloud servers with a dedicated connection. *File Type Performance* – Files are now easier to open and saving them is much faster, which is critical for performance. Files can now be saved in any format, regardless of the original file format. When the video file format is different from the source file format, the new file format can be determined automatically. If you are a beginner then you should be very picky how you're going to edit your photos and start with a 'reset' prior to starting anything. This tool lets you erase or work on areas, copying and pasting onto new layers or resizing.

It is very easy to accomplish with this feature, since there is no restarting the application as long as you don't export it from the editor. However, this feature is very useful especially when you need to undo or redo any changes on a photo that you have already done to it.
