Photoshop CC 2020 blends your photo editing and creative goals into a whole. Like the traditional Photoshop, CC 2020 also allows better editing and color adjustment outside of the full-featured image editor. In this regard, the image based app provides:

- Image processing and editing features in full resolution
- Modal UI and a completely redesigned 2D UI accenting the most commonly used tools
- A re-designed tool palette to account for the new and increased capabilities in the adoption of modern APIs, and for the simplification of the UI
- New and improved 2D and 3D features that help the user build images very quickly

The new native APIs are multi-platform and supports desktop, mobile, and web, and allows for modern advancements beyond traditional 2D design workflow. They also allow the easy integration of popular cross-platform elements and plug-ins that simplify 2D design. The new native APIs and tooling allow for new opportunities in how Photoshop can be used to bring more value to designers, developers, and creative professionals. Additionally, it lowers the barrier to introducing new design and development talent to modern web technologies. With native APIs, the ability to modify picture elements, such as background removal, and the combination of these and other image processing features is greatly increased. With the new tools in Photoshop CC, the user can combine image manipulation techniques to create dramatic images. Image processing in Adobe CC is very similar to the image processing tools in Photoshop in that they have a heavy emphasis on variety in color correction, sharpening, and other adjustments.
