Adobe Photoshop CS6 has a lot of features that make it different from other similar software programs. One of its most prominent features is its huge collection of tools. It has a tool that is used to create the initial masterpiece of your images. It has a tool for the post processing of images. It has a tool that is used to create the lighting of the image, and it has a tool that is used to create the effects in the images. There are literally endless number of tools in the software, including tools for retouching, tools for color correction and tools for image optimization.

In addition to little tweaks, Lightroom 5 introduces five compact new features. I'm happy to report you do have some flexibility, as this update is focused on photographers, not megaprofessionals. Of the new features, I'll discuss the most important - frame size control - because that's the reason Lightroom is rated for 4.0 on Metascore. As I mentioned previously, that particular rating means Lightroom is a Creative Cloud-qualified application, which means access to bug fixes and performance improvements. The other four features are discussed next. The new "Frame Size" feature allows you to maximize the capacity of the preview window. This is helpful when you are working on something and want to double-check an image. I know there are tools that do this automatically, but those are not yet fully ready for the masses. This version of Lightroom is very smart in allowing you to spot this change almost instantly, so you can preview and make small adjustments without having to click through each image. The appearance of the window's border will change to a standard size. You can independently set the size for each edge and corner in the options palette. The next edition in the update is, oddly enough, a feature that offers you wider flexibility when cropping. The "Crop to Aspect Ratio" feature provides a zoom-in view of the tick boxes in the Crop tool. For the first time in nearly 20 years, Adobe has started a serious line of camera support: Adobescan. The company has a suite of in-house software that is becoming more and more powerful with each iteration, all designed in-house. Adobe Photoshop is one of the initial applications that has adopted the camera hardware and has packed it with innovative high-tech tools. Because the application is not only a good photo editor, but a good tool for creativity in general, the possibility of Adobe Photoshop being used at any price level is virtually unlimited. Considering how inexpensive inexpensive good quality cameras are, multi-user options, and the adoption rate of popular applications like Photoshop, it is hard to write off Adobe as a fad. One of the most impressive aspects of Photoshop is the level of integration Apple has achieved with it. You can combine the filter effects in apps like Photoshop and adjust the brush size from within the camera app, either with the Touch Bar, the on-screen LCD, or the Shutter button. From there, you can easily export the images to your computer for further editing, presentation, or so that it can be shared.

Adobe Photoshop also offers improved support for textures from plugins made using the bundled Photo UV Layout plugin. A new "Automatic Cache" feature creates a cached template to speed up workflows for repeated tasks with a new "Load from Cache" functionality. And a new "Spill Detection" feature works with content-aware fill tools to quickly fix minor hairline glitches (such as freckles, soapsuds, etc.) in images being retouched. Adobe also offers new compatibility updates in Adobe HDR Pro and Adobe Color optimizer, including support for file sizes up to 12 terabytes, faster performance, and support for OpenColorIO's Open Source LUTs. Updates are also coming to Photoshop and Photoshop for iOS and iPadOS.

Woot! Happy new year! Adobe has made some big updates to Photoshop CC since the holidays in 2020. You can get a glimpse of the update from the above link. As always, the full release notes are available here. Three of the things we're most excited about are: **But on the downside.** Accessibility options (like "Enhance your images with smart filters, built-in GPU Processors, and real-time assistance.") are being killed off. For now, you'll have to purchase Photoshop separately for all of these features. "As we work across the world to collaborate with people on-the-go, we wanted to empower them with an app that is easy to use, mobile and intuitive on multiple devices," said John Warnock, Adobe fellow and senior vice president of imaging. "With Share for Review, the most creative minds in the world can now share work in real time without leaving Photoshop. And with new workflow-enabled features in Photoshop CC, the app can be used anywhere for anything; from editing photos, to video, to interviews, across a range of devices."

The most powerful tool and feature is the ability to move, duplicate, resize, copy a layer or even several layers. There are so many new things to say about new features in the newer versions of Photoshop, but the most interesting feature is that is the amazing new feature: user action's. It is a really cool new feature that was first featured in CS5. In addition to the editing and design tools Photoshop was known for, other new features include:

- Selection enhancements including improved Smart Scissors, the ability to create the same selection directly from a selection in another image, and expanded filter options;
- New, one-click creation of SVG (Scalable Vector Graphics) files from within a browser, including flexibility to export directly to web and mobile platforms;
- The addition of new crop and straighten tools;
- Renewed Retouch controls, such as improved drop shadow and mold/lighten effects;
- Improved Fireworks integration for vector and raster support;
- and improvements to the XMP (Exif metadata) parser

"Our goal is to make it easier for designers to create and collaborate on creative projects, no matter where clients, colleagues or co-workers are located," said Scott Belsky, chief product officer at Adobe. "For designers who are accustomed to working in Photoshop, Share for Review removes the cabling and security concerns of having to send and share files and enables designers to work on projects together more easily. In addition, the new search capabilities in Adobe Stream allow Photoshop enthusiasts to collaborate while browsing content in a browser or online, like they work on other design programs like Sketch. And with the new one-click Delete and Fill tool and the ability to customize the new browser, a single action with just a few clicks can mean perfection for those creative images."
