Thanks for an extensive and fair review. I was particularly interested in the performance info (the first 2 posts)... I am an end user (not a professional) and I use many of those performance tips when it comes to tweaking my photos. And yes, I like LR5 and it helps me tremendously to work on my photos. There are indeed some things that could have been better, but on the overall, it's a great software. Cheers! Thanks for the well written review! I will comment on just a couple of items that you brought up. While the performance info is very helpful, I'm not sure if you looked using the CF or CMD menu items. Thanks for noticing the problem. The newest version of LR has some features I hope will be useful. You laughed at the LR Academy Articles, but I think I should mention that they get better and better each time I visit! I've been pretty excited about the keywording and batch renaming features. I set up a simple batch batch and it's backed up and easy to recall any time I need to batch rename. But I don't think Lightroom 5 is quite ready for the wedding I'm working on. Oh, well. The time difference between import and export for the RAW files is outstanding! The new chunksize feature in the export dialog is both helpful and an answer to a question I didn't think to ask: "What size do I need to back up my RAW files?" Since the exported files are poly-based, chunksize is simply the number of megapixels required to hold one piece. The nice thing about the poly-based file format is, since the firmware can remove whatever is in excess, the system will work well with whatever size NVR you use in your house. Since I'm using a Canon NVR, which has a 32GB drive, 600MB is an enormous chunk. Of course, I'll likely set the chunksize to 4 or 5 MB to reduce the file size, but the smaller chunksize works well on the D3 225 while constructing the presets. It's especially valuable to use the chunksize feature while starting the presets. No more trial and error to get them started. The chunksize is also a good measure when shooting to see if you have enough room on your memory card. Surely someone has used this feature to improve the performance of their workflow.
