There are a number of different blending methods, including Dodge and Burn, Soft Light, Hard Light, Vivid Light, and Blur; you can adjust the amount of blur, and even control the strength and direction of the blur. If you have an idea of how Airbrushing works—well, that's what the Blur Bridge Tools are for. They mimic the process: simply create a blur shape, apply it to the layer using the Blur Tools > Blur artboard, then edit the shape and size to suit your style.
