My wife and I had used Elements for the last couple of years to create photos and images for an online photo blog. She is very proficient with photography and the computer. We decided to try Elements for her birthday this year. I can't think of a more suitable gift for her. We had two basic requirements. She wanted to be able to edit small images (300 dpi) and she wanted to be able to get them posted (she's somewhat technical). Because we live in a rural area, we don't have easy access to a print shop so we needed to publish these online. It was a bit of a challenge as we do not have a color printer. The first couple of images we figured out quickly. The main issue however, was the shades. She uses all 5 shades of green for her grass. Elements showed as 9 greys when we had no more than 6. She was a bit skeptical when she first saw the results as grass looked too green. But once she saw it in person, she was quite impressed. She was able to get the exact colors she wanted. The other images were a bit more difficult to edit. I had to use color adjustment to get the tones correct. When she started using the curves we noted that the range was broader in Elements than in Photoshop. One day she told me to not mess with the colors and that she could take care of that in the Lens Corrections panel. That was a much faster solution than tinkering with curves. Once she was done editing, we were able to downsize the images to 300 DPI. The step-up from 72 DPI to 300, in addition to the increased size, made the images look very nice. There was no sign of banding. In my opinion, we got more than what we paid for. Of course, she can do a lot with her images, including print and other photo print jobs.

Photoshop is now available as a native app on iPad. The update brings powerful features such as Live Sharpen, Affinity Photo-esque image adjustments that can be applied in real-time, and high-quality image file formats for mobile devices. Photoshop for iPad also supports features such as custom gestures to marquee a selection between different tool types, and with the new Content-Aware Removal feature, customers can trim an image to the background in just a few steps. One reason Adobe is excited about the update to Photoshop and the entire Creative Cloud portfolio is because it's developed on side of Apple, the company behind the world-leading smartphone, iPad and Mac platforms. "The cross-platform support and hardware rendering capability represented by apps like Photoshop and Lightroom have made these tools key in creating a seamless end-to-end workflow for professionals in the IOS offering," said Philip Roth, Senior Director, Environmental Advertising and Communications, at Apple. "By bringing together all of the products of the creative cloud into a single app that smoothly integrates into IOS and the rest of the Apple platform, we are enabling a more powerful and more immersive creative workflow," said Lisa Ehrlich, Senior Director, Consumer Products, for Adobe. I have a passion for art and combining two of my favorite elements, my portrait photography and Photoshop. One of the best tools I use is the new Content Aware Fill feature for cropping photographs with out getting a misshapen clone of the subject. This feature allows the user to hover the mouse over a section of an image, crop it, and smoothly blend into the surrounding area. I was able to achieve great results with these photos in just a few clicks. It is so easy to get a myriad of results for the amazing filter or blurring effect.

If you're an independent creator, or a student of graphic design, many of the apps you want to use are still on native macOS desktop platforms. For them, Adobe Photoshop has provided a rough path between the web and the desktop. There are still some problems: the app needs to be used in place of the browser, as should several applications, which still need to be set up to the right mode of operation; Adobe has ignored the fact that many users rely on non-native desktop applications to complete their work. With regards to the Adobe Creative Cloud subscription, this is something that all customers can do. However for those customers who already have a version of Photoshop, it is available to use Photoshop for an indefinite period or ability to run Photoshop Creative Cloud for an indefinite period. So there is no free option to Photoshop Creative Cloud.
