The company has also added some Touch Bar controls, allowing you to control a feature on-screen if you're editing something. Touch Bar features aren't hugely new, but Pixelmator's is particularly handy, and it helps that Pixelmator is free. The Touch Bar also has a cool Quick Nav shortcut to your favorites (like cropping). If, like me, you do a lot of printing on the big screen then you're going to need a dedicated app to do that. In previous versions of Photoshop, that would have been Photoshop Photo, but you can also use a dedicated app like EncoreX by Iridient. The biggest difference in EncoreX is that you don't have to re-export your PSD. It will create temporary thumbnails in the app and automatically compress them into something for your printer to hit. (Note that it doesn't work with all printers, and you need to be running Windows, Mac, or Linux with CUPS installed.) A simple version of Photoshop allows users to create their own presets in real-time. These presets specify a style and including a number of pre-configured effects, filters, colors and overlays. The app provides real-time editing of layers, layers groups and filters and the ability to apply text to layers, add animations, and add photos.
