What I'm looking for is the new features coming soon in Adobe Photoshop, however, I haven't found anything yet to add it to my list. So, I decided to create a shortlist of the upcoming features and the ones that are already released and it's worth checking out. The features in to-do list may not be the same for every user who is looking for image editing software but at least the list covers most of the things you never want to miss if you want to keep up to date. Don't forget to go through the whole list and if you want to check any of the features out, you might want to wait a couple of months so you can experience the full feature set that this software has to offer. **Adobe will continue to improve Photoshop practically by adding brand new features and making it faster, better and easier to use in the future. So, we expect several new features will be revealed in the next couple of months.** One of the most attractive features of Photoshop CC is how easy it is to edit your photos. There is a new image onboarding system that helps the user find the correct settings for the image. This works in a similar way to Apple Photos' automatic doodling feature, which suggests phrasing, colors, and background images. You can, for instance, picture your image within a geometric shape, putting it on the background of a brush, and then altering the brush with different opacity, color, and sizing controls. The only disappointing part is that the drawing feature doesn't work for images that are not in the RAW format, but this still sets it apart from any automatic editing apps on the market.
